AI Agents vs. Agentic AI: A Conceptual Taxonomy, Applications and Challenges

Published: 2025-07-19 | Review: pending | Relevance: 16 | Credibility: 88

AI Agents vs. Agentic AI: A Conceptual Taxonomy, Applications and Challenges. This review critically distinguishes between AI Agents and Agentic AI, offering a structured, conceptual taxonomy, application mapping, and analysis of opportunities and challenges to clarify their divergent design philosophies and capabilities. We begin by outlining the search strategy and foundational definitions, characterizing AI Agents as modular systems driven and enabled by LLMs and LLMs for task-specific automation.

Key findings: AI Agents vs. Agentic AI: A Conceptual Taxonomy, Applications and Challenges. The role of agentic AI in shaping a smart future: A systematic review

Published: 2025-05-07 | Review: pending | Relevance: 16 | Credibility: 88

The role of agentic AI in shaping a smart future: A systematic review. Artificial intelligence (AI), particularly Agentic AI, is increasingly critical for addressing the demand for speed, efficiency, and customer focus in modern organizations. However, the rapid evolution of Agentic AI, including Generative AI (GenAI) agents, has outpaced a cohesive understanding of its applications, challenges, and strategic implications. This narrative review explores the role of Agentic AI in shaping an intelligent future.

Key findings: The role of agentic AI in shaping a smart future: A systematic review. Artificial intelligence (AI), particularly Agentic AI, is increasingly critical for addressing the demand for speed, efficiency, and customer focus in modern organizations.

Improving Variable-Length Generation in Diffusion Language Models via Length Regularization

Published: 2026-02-06 | Review: pending | Relevance: 16 | Credibility: 88

Improving Variable-Length Generation in Diffusion Language Models via Length Regularization. Diffusion Large Language Models (DLLMs) are inherently ill-suited for variable-length generation, as their inference is defined on a fixed-length canvas and implicitly assumes a known target length. When the length is unknown, as in realistic completion and infilling, naively comparing confidence across mask lengths becomes systematically biased, leading to under-generation or redundant continuations. In

Metacognition in LLMs: Foundations, Progress, and Opportunities

Published: 2026-07-12 | Review: pending | Relevance: 40 | Credibility: 88

Metacognition in LLMs: Foundations, Progress, and Opportunities. Metacognition is a foundational component of intelligence critical to effective learning, problem solving, decision-making, communication, and more. In recent years, it has become increasingly recognized as a cornerstone of capable, transparent AI systems. Yet while LLMs have made significant progress across diverse real-world tasks, it is not yet clear when, how, or to what extent they can exhibit or be endowed with effective meta

AgentCheck: A Reproduce-Intervene-Mitigate Workbench for LLM Agents over MCP

Published: 2026-07-12 | Review: pending | Relevance: 32 | Credibility: 88

AgentCheck: A Reproduce-Intervene-Mitigate Workbench for LLM Agents over MCP. Tool-using LLM agents are mostly evaluated assuming all tools work. When a tool times out, returns a week-stale value, or has its description poisoned in deployment, the developer needs a controlled way to reproduce the failure, test a fix, and confirm the fix worked before deployment. We present AgentCheck, an open-source web workbench that turns an MCP server into an intervention surface. AgentCheck runs an agent agent

Inside the Unfair Judge: A Mechanistic Interpretability Account of LLM-as-Judge Bias

Published: 2026-07-12 | Review: pending | Relevance: 0 | Credibility: 88

Inside the Unfair Judge: A Mechanistic Interpretability Account of LLM-as-Judge Bias. Existing studies of LLM-as-judge scoring bias work predominantly at the input-output level: they perturb inputs, measure score deltas, and propose prompt-level mitigations. We argue that the same biases admit a representation-level account in the judge's hidden state, complementary to the input-output view and operationally useful in ways it does not afford. We report three findings, across seven judges, seven

Characterising AI Models for Cataloguing

Published: 2026-07-12 | Review: pending | Relevance: 16 | Credibility: 88

Characterising AI Models for Cataloguing. The creation of digital collections involves not only the digitisation of content, but also the creation of catalogue records for it. This often-overlooked task requires slow and costly expert manual work. In this project, we have evaluated the application of AI models to this task, comparing different implementations and models. This work includes a qualitative and quantitative evaluation of the experiments carried out, as well as recommendations on the

Beyond Sally-Anne: Evaluating Theory of Mind in LLMs using Epistemic Schelling Points

Published: 2026-07-12 | Review: pending | Relevance: 0 | Credibility: 88

Beyond Sally-Anne: Evaluating Theory of Mind in LLMs using Epistemic Schelling Points. Text-based evaluations of Theory of Mind (ToM) in Large Language Models (LLMs) often involve cognitive tests akin to the Sally-Anne task that can be gamed due to exposure to relevantly similar tasks in pre-training and do not obviously test models' functional ToM abilities in ways that generalize to naturalistic settings. To address these issues, we introduce the Epistemic Asymmetry Schelling Task (EAST), a tw

The Nuts and Bolts of Natural Language to SQL Translation: A Systematic Analysis of Model Pipeline Optimisation Approaches and their Interactions

Published: 2026-07-11 | Review: pending | Relevance: 0 | Credibility: 88

The Nuts and Bolts of Natural Language to SQL Translation: A Systematic Analysis of Model Pipeline Optimisation Approaches and their Interactions. In the age of large language models, Natural Language to SQL (NL2SQL) translation remains an open problem with many useful applications. We explore interactions between several NL2SQL pipeline extensions to inspire development of more lightweight models. Specifically, we integrate the NatSQL intermediate representation, include a preprocessing step an

Massive AI buildout poses latest inflation threat as consumers pay more for laptops and electricity

Published: 2026-07-12 | Review: pending | Relevance: 32 | Credibility: 75

Massive AI buildout poses latest inflation threat as consumers pay more for laptops and electricity American consumers — and the Federal Reserve — are being hit with another high-cost headache. The gusher of investment in data centers — likely topping \$700 billion this year — to power artificial intelligence has made memory chips, computer processors, and other equipment, as well as electricity more expensive, and economists expect it will continue to push up inflation at least through the end o

The importance of human review in AI-driven physicians' documentation

Published: 2026-07-12 | Review: pending | Relevance: 24 | Credibility: 75

The importance of human review in AI-driven physicians' documentation Artificial intelligence in clinical settings is becoming more common. AI speech-to-text had a moment in the spotlight on the medical drama series "The Pitt" earlier this year. "Studies show that you can spend 80% less time charting," says character Baran Al-Hashimi, a doctor showing her peers a new AI speech-to-text tool. But a skeptical colleague raised concerns after the tool misheard the name of a patient's medication. Arti

Key findings: The importance of human review in AI-driven physicians' documentation Artificial intelligence in clinical settings is becoming more common. AI speech-to-text had a moment in the spotlight on the medical drama series "The Pitt" earlier this

What is Artificial Intelligence?

Published: Unknown | Review: pending | Relevance: 72 | Credibility: 55

Definition of Artificial Intelligence Artificial intelligence (AI) is a field of computer science that relies on the ability of machines and computer systems to simulate certain human cognitive functions. It uses artificial neural network models, which mimic the functioning of neurons in the human brain, as well as sophisticated algorithms to analyze large amounts of data. With these technologies, AI can understand complex questions, predict intentions, identify objects in images, model behav
